PROJECT INSTRUCTIONS

PROBLEM STATEMENT

3. Validator Class

`com.infy.infyseries.validator.UserValidator.java`

Implement this class according to the class diagram and the description given below:

Method Description:

1. `void validateUser(UserDTO userDTO)`

This method receives an object of `UserDTO` and calls the respective methods to validate the values and throws an object of `SeriesBookingException` with the message, based on the violation, as given below.

2. `Boolean isValidRegDate(LocalDate regDate)`

- This method validates the `regDate` received
- `regDate` should not be a past date.
